

START

X marks the spot!

Design a treasure map and write instructions for a friend to follow and find the hidden treasure.

There must be at least 12 steps to make sure the enemy will not discover the treasure first. One square = one space.

You must ask your friend to change direction using only compass bearings (degrees) and clockwise/anti-clockwise.

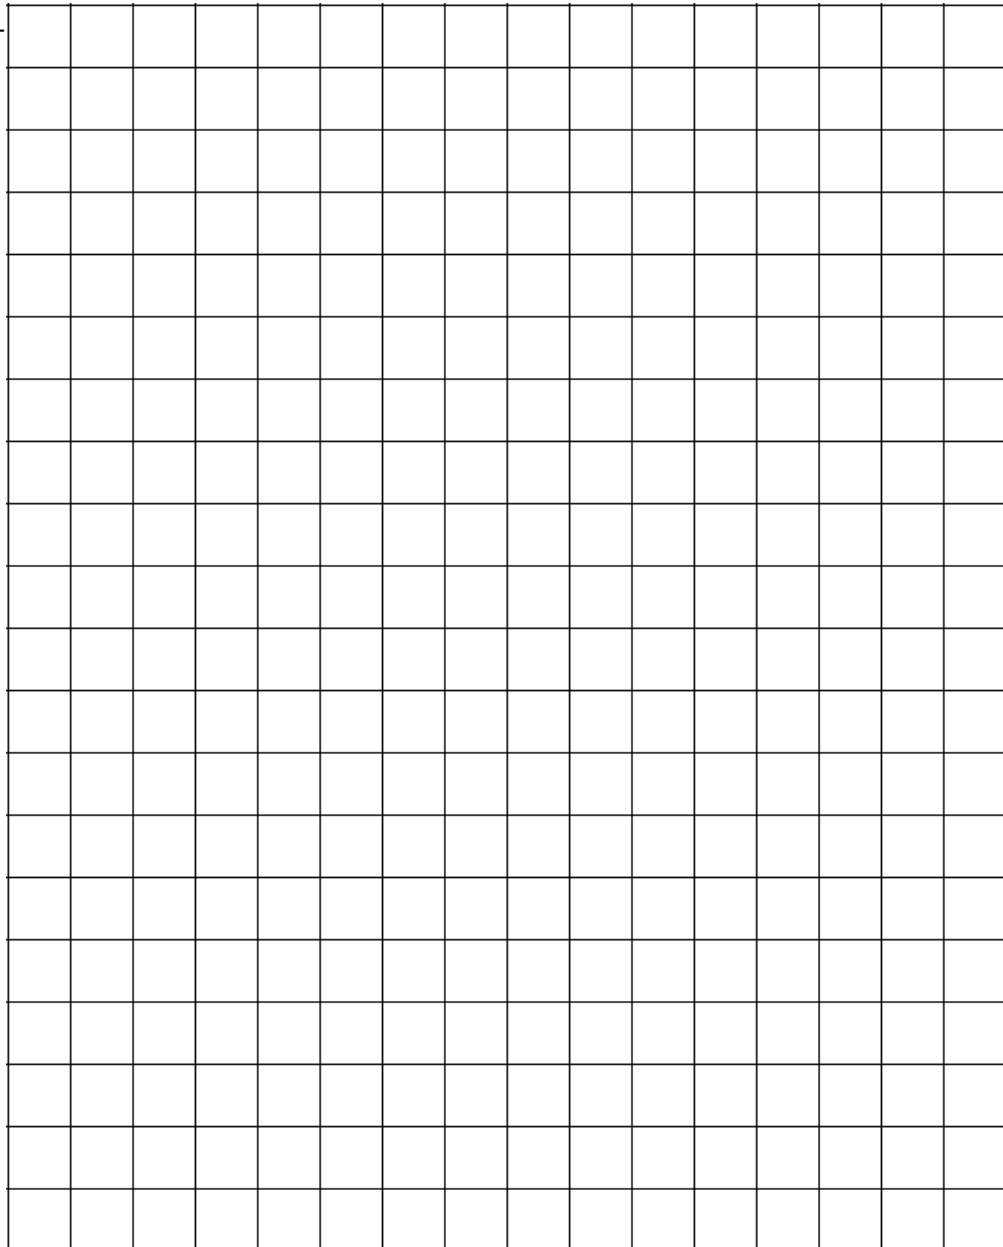

Make sure you begin by telling your friend which direction to face and guide them one step at a time to the treasure square.

For example:

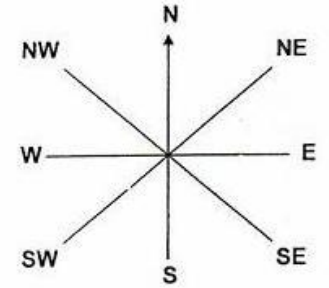

- 1) Face East
- 2) Move forward 5 spaces
- 3) Turn 45° clockwise
- 4) Move forward 1 space
- 5) Turn 90° clockwise
- 6) Move forward 3 spaces and so on.....

Write your instructions in a secret place (it is important to keep secret instructions separate in case your map falls into the wrong hands!) Ask a friend to follow your instructions and see if they are successful in finding the hidden treasure!
