

How to Make a Dark Lantern

Have you ever wanted to be able to darken your lantern when an enemy approaches? Here's how to make your own dark lantern.

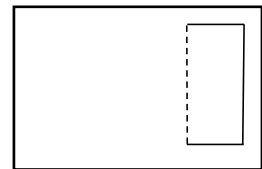

You will need

- One and a half sheets of black paper
- Tracing paper
- Scissors
- Glue

What to do

1. First, cut three sides of a tall door into one end of your bigger sheet of black paper.

2. Then, fold the door back along the fourth side.

3. After that, glue a piece of tracing paper inside the opening you have cut.

4. Bend the black paper around and overlap the edges to make a cylinder.

5. Next, glue the edges of black paper together.

5. Using half a sheet of black paper, concertina fold it all the way along.

6. Finally, bend the concertina-folded sheet to make a pointed hat, placing it inside the top of the lantern.
